# VDA 4933 and 4945

## Introduction to the VDA recommendations in the transport chain

EDI support for the global transport chain in the automotive industry has become increasingly important in recent years.

With the VDA recommendation 4933, a set of messages for the transport order in the full and empty container processes were developed. It is becoming even more essential to track a transport, a shipment or an individual transport load unit. For status reporting, the VDA recommends the use of VDA 4945.

These recommendations are aligned with the other VDA recommendations in the automotive supply chain.

GEFEG offers the following one-day training course as an introduction to the VDA recommendations in the transport chain. The focus is on the mapping of the full load process. The training is aimed at planners and implementers who are new to the planning of this message or who are interested in the differences to previously used processes or messages.

## Content

- Application scenarios for the Transport Order
- Transport Order
- Transport Order Confirmation
- Application scenarios for Transport status notification
- Status messages for Transport, Shipments and Transport loading units
- Structure of the individual messages

## Target audiences

Planners and implementers

## Prerequisites

Basic knowledge of EDI

## **Duration / Timetable for training**

1 day / 10:00 - 16:00

## **Note**

On request, we can also provide on-site training at your company. We also organise workshops tailored to your company with the aim of conveying the topics in an application-oriented manner.
