# Specification, Documentation and Publication of EDI Interfaces (Workshop)

Develop EDI interfaces in an individual workshop

Regardless of whether you use EDIFACT or another eBusiness standard - its concrete use in your company must be specified in detail.

- Are the specifications of your EDI interfaces up to date?
- Do you have a comprehensible and easy-to-read description for all EDI interfaces?
- Do your previous specifications provoke a lot of questions from your EDI partner?
- For example, you are planning a new EDI system and have to migrate the entire previous data exchange to the new system. Are all format descriptions and mappings available and up-to-date?

If you answer one of the questions with "No" or "Don't know", you should take action. We offer you an individual workshop in which we work with you to create the specification of your EDI interfaces using the GEFEG.FX software.

## Contents of the workshop

We'll settle this in a preliminary meeting: Which EDI interfaces should be developed as documentation? Which in-house formats do you use?

- Joint creation of specifications on the basis of standards such as EDIFACT, EANCOM, Odette, VDA, etc. or in-house formats
- Creation of a documentation template for your company
- Consolidate interfaces
- Creating profiles for different EDI partners in one guide
- Capturing and integrating user-defined codes or code lists, e.g. colour codes, special conditions, factory labels
- Create mapping documentation between in-house and EDI formats
- Preparation of the guide to be able to test messages
- Transferring Source and Target Format Descriptions to the EDI System

## Results of the workshop

- EDI guides in GEFEG.FX format
- Documentation template
- Documentation in the following formats: rtf, doc, docx, pdf, html or chm
- Optional: Mapping documentation
- Optional: Export of format descriptions for selected EDI systems

## Target audiences

Companies and organizations developing EDI interfaces

## Duration

2 - 3 days, by arrangement. Please contact us.

## Note

The workshop can either take place at your premises or at our headquarters in Berlin.
