Publishing-Projects with GEFEG.FX

Workshop publishing projects, layouts and reports

GEFEG.FX lets you plan and develop application specifications based on EDI standards, flat-file formats or XML. But GEFEG.FX offers much more: extensive functions support you in visualizing messages and test data. The resulting documentation in RTF, PDF, or HTML format makes it easier for employees without a strong IT focus to understand the application, and also facilitates the distribution of the specification to cooperating businesses, or to publish it in the intranet or internet.

You would like to publish your specification(s)? With our combined training and subsequent 1 to 2-day workshop, we offer you the opportunity to first learn the basics and then create your own specifications as human-readable documentation. During implementation, you benefit from the expertise and best practice know-how of our trainers, who have already implemented many publications. As a result, you will receive complete, platform-independent documentation that can be automatically generated with GEFEG.FX.

Content

1-day introduction: Basics Reports, layouts and publishing projects

- Layouts & Reports
 - Functionality of reports and layouts
 - Use of standard templates and publication
 - Different report types
 -
- Publishing Projects
 - How do publishing projects work?
 - MS Word/PDF documentation vs. HTML documentation
 - Automation of exports (Excel, XSDs, etc.)

1 or 2-day workshop:

- Revise, adjust or create new publishing projects (HTML, PDF, Excel, exports)
- Small adjustments to existing reports and layouts

Course objectives

The workshop aims to create specific, human-readable documentation to be applied for the distribution or publication to partners. Participants will know how to visualize and present

their guidelines and test data by modifying existing and designing their own layouts to create a more complex documentation in HTML format. The participants are able to create Word and PDF documentation for a project with different GEFEG.FX objects.

Target audiences

Experienced users of GEFEG.FX whose requirements are not met by the default documentation at the push of a button, who want to create complex documentation of their GEFEG.FX objects, automate exports from GEFEG.FX objects (XSD, Excel) or who have specific requirements regarding their documentation layout.

Prerequisites

- Participation in one of the courses "Introduction to GEFEG.FX with classical EDI standards", "Planning and applying data models" or "XML schema development" or distinct experience in handling GEFEG.FX
- Basic knowledge of HTML is an advantage

Duration / Timetable for training

Workshop on request and after individual configuration and agreement

Note

This workshop takes place on site at your company or at GEFEG's premises in Berlin.
